

TMK UP ULTRA™ DQX
Threaded & Coupled Drilling with Casing Connection

TMK UP ULTRA™ DQX

Threaded & Coupled Drilling with Casing Connection

Performance and Value

TMK IPSCO has designed the TMK UP ULTRA™ DQX with our patented FullContact™ premium thread form and an API coupling in order to optimize the balance between performance and cost. Validated using industry tests, it can withstand the pressures during hydraulic fracturing after fatigue from rotation through a horizontal bend. The DQX features a pin nose-to-pin nose torque shoulder that allows high RPM when landing the casing string or cementing. The DQX is the industry's only semi-premium connection without a seal ring that has been tested according to a major shale operator's specific testing protocol.

Innovative Solutions

TMK IPSCO recognizes that as oil and gas well geometries evolve, so should your casing and connections. TMK IPSCO provides casing and premium connections that increase casing performance in well environments including high-temperature, high pressure, gas and hydraulic stimulation. Integrating TMK IPSCO casing products into your well can give the assurance that comes from highly engineered premium connections and tubulars that are tested under the toughest industry standards. The TMK UP™ products include threaded and coupled connections for greater cased hole strength and slim-profile integral connections that preserve a large casing internal diameter.

Global Strength

TMK IPSCO is an industry leader in welded and seamless pipe, premium connections and accessories with the strength of more than twenty manufacturing facilities strategically located in the key energy producing areas of the world. Our legacy of quality, exceptional customer service and focus on innovation translates into unparalleled value for our customers. Our strength—in product and presence—gives customers a competitive edge, making us the ideal supplier for the oil and gas industry as well as many industrial markets worldwide.

TMK UP ULTRA™ DQX

Threaded & Coupled Drilling with Casing Connection

For High RPM Rotating and Drilling

- Designed for high RPM when landing the casing string or cementing
- Pressure ratings that equal API collapse and MIYP
- Only connection validated without a seal ring, according to a major shale operator's specific testing protocol

External Metal Seal and Positive Torque Stop

- Provides pressure integrity
- Provides constant make-up torque values

FullContact™ Threads

- Increased tension and compression efficiency
- High bending capacity and evenly distributed stresses
- Deep stabbing with quick, easy make-up

Pin Nose-to-Pin Nose Positive Torque Stop

- Excellent torque capacity
- Reduced coupling fatigue
- Verifiable make-up with positive torque shoulder

Run-Out Threads

- Maximizes critical cross sectional area
- Low interference run-out threads enhance fatigue life
